

Plant Operator: Role Description

Role Purpose: To perform all required compliance time, maintenance, operation, and sampling requirements of drinking and wastewater plants.

Do the work you love; in a place you love to work.

Are you tired of working with other people who don't really care about their job? Are you tired of being held back from achieving what you want? Do you need a change and an environment where you can make a difference, knowing your work is valued and appreciated?

At Plant Technicians, we do things a little differently than our competitors.

Some of those competitors are major corporations that only care about their bottom lines. Others are local companies that can't afford to pay people what they need, are always demanding more from you, while giving very little extra for your effort.

Our vision for our people is to build a company filled with families and friends.

As we all live in an inflationary market, being able to offset the rise in living expenses weighs heavily on our minds, and our priorities.

Because of our guiding values and principles, which govern the way we treat others, we have been blessed with wonderful clients who appreciate the work of our incredible operators.

In order to protect our people and the environment in which they work, we are highly selective about the people we allow to join our team.

Not everyone will make the cut.

If you are passionate about running clean plants, if you are insistent on doing things right, and if you respect like-minded people you work with, then your next step is to connect with us today to see if this is the right fit.

What you will be doing:

- We are seeking class C, dual licensed drinking and waste water plant operators, often referred to as package plant operators.
- You will be monitoring plants, recording data in log books and field sheets for the office to create MOR's and DMR's.
- You will be collecting all the compliance samples for each plant throughout the year.
- All your paperwork is managed by the office. Reports are completed by office staff, leaving you free to focus on what you love: Running a clean plant.

What we require:

Plant Operator: Role Description

- Valid driver's license with clean driving record
- Current class C or higher license in drinking and waste water plant operation

If this sounds like what you've been looking for, then your next step is to give us a call or complete an application online to schedule a time for use to get to know you.
